

Lab Manual

Step: --

1. Create a repo in local machine
2. Create a file (default it would be as master) with 1st line.
3. Add 2nd line to the file and save it to the BRANCH on GIT local repo
4. Merge the file to the master on the GIT Local repo
5. Edit the file with an Editor on the local machine, and add 3rd line to the file and save it on your machine, Commit this change to the Branch copy on GIT local repo.
6. Push master origin to GITHUB.com & Push branch origin to GITHUB.com
7. Finally, merge the Branch on GITHUB.com to Master on GITHUB.com.

Step1: Create an repo in local machine

Install the GITHUB desktop and login with GITHUB.com credentials

The repo → “VCL-repo” and click on “Create Repository”

This would create a folder with “.git” in it.

Note→ to to see the hidden file , please enable “show hidden files” in the folder options.

GITHUB – lab Manual

Step2: Create a file (default it would be as master) with 1st line.

Save the file.

GITHUB – lab Manual

And once you click on the “GITHUB desktop”

The changes are automatically detected.

Click on “Commit” to commit the changes to the local repo.

Once the commit is done, the details would reflect in the “history”

Step3: Add 2nd line to the file and save it to the BRANCH on GIT local repo

Create an branch “b1” now.

Create a branch

×

Name

B1

Your new branch will be based on your currently checked out branch (master). master is the default branch for your repository.

Create branch

Cancel

Click on “create Branch”

Next, lets add the 2nd line in the branch

GITHUB – lab Manual

The changes would be detected in the GITHUB desktop

“Commit” the changes.

The “history” would show like below

GITHUB – lab Manual

Current repository: VCL-repo | Current branch: B1 | Publish repository: Publish this repository to GitHub

Changes | History

Select branch to compare...

Update File1.txt
Vishwa committed just now

Create File1.txt
Vishwa committed 4 minutes ago

Initial commit

Update File1.txt

Vishwa committed 58e59d4 | 1 changed file

File1.txt	@@ -1 +1,2 @@
1	1 This is the 1st line in the Local repo maste
	2 +2nd line added to the local repo branch

Note→ Once u change the “current Branch” to master.

The notepad++, will say that “the file was modified” and the “2n line” would disappear.

Current repository: VCL-repo | Current branch: master | Publish repository: Publish this repository to GitHub

Changes | History

0 changed files

E:\Repository\VCL-repo\File1.txt - Notepad++

File Edit Search View Encoding Language Settings Tools Macro Run Plugins Window ?

9-Jul-19 | new 1 | new 2 | new 4 | Dockerfile | File1.txt | File1.txt

1 This is the 1st line in the Local repo master.

2

Step4: Merge the file to the master.

Switch back to master.

Now let's merge the branch1 to master.

Click on the Branch → Merge into current branch,

Select the Branch “B1” that needs to be merged with the master.

Then click on → “Merge B1 into master”

GITHUB – lab Manual

To test the output.

The Branch “b1” and the Master should show both the lines in the file.

Step5: Push local master to GITHUB.com.

To push the files from local repo git to GITHUB.com,

Select the “**Master**” and click on “**Publish Repository**”

This would automatically create the repository in the GITHUB.com and push the files there.

Make sure the “Keep this code private” is UNTICKED.

Note→ The remote repo name does not need to be the same as the local repo.

Just for our comfort we keep it the same.

GITHUB – lab Manual

The master copy of the “file1.txt” is visible in the GITHUB.com.

GITHUB – lab Manual

Now lets push branch copy.

Change the Current branch in the “Github desktop” to B1.

Click on the “publish Branch”

This is the output of on the GITHUB.com on the branch.

Step7:

Finally, merge the Branch on GITHUB.com to Master on GITHUB.com.

Add 2 lines in the branch of GITHUB.com

To edit the branch

The screenshot displays the GitHub web interface for editing a file. At the top, the breadcrumb navigation shows 'Branch: B1' and 'VCL-repo / File1.txt'. A commit summary bar indicates 'Vishwanathms Update File1.txt' with commit hash '58e59d4' and a timestamp of '17 minutes ago'. Below this, the file content is shown with 3 lines (2 sloc) and 87 Bytes. The file content is:

```
1 This is the 1st line in the local repo master.
2 2nd line added to the local repo branch
```

Below the file content, there is a section for editing the file. It includes a 'VCL-repo / File1.txt' breadcrumb and a 'Cancel' button. The 'Edit file' tab is active, showing the file content with an additional line:

```
1 This is the 1st line in the local repo master.
2 2nd line added to the local repo branch
3 3rd line added to the github.com branch b1.
```

At the bottom, the 'Commit changes' dialog is open. It shows the commit message 'Update File1.txt' and a text area for an optional extended description. The commit options are:

- ☒ Commit directly to the `b1` branch.
- ☐ Create a new branch for this commit and start a pull request. [Le](#)

The 'Commit changes' button is highlighted in green, and a 'Cancel' button is also present.

Click On “Commit Changes”. This would commit to the Branch “b1”

GITHUB – lab Manual

Click on “Pull requests”

Click on “New pull request”

Vishwanathms / b27-git-repo

Code Issues 0 Pull requests 0 Projects 0 Wiki Security Insights

Comparing changes

Choose two branches to see what's changed or to start a new pull request. If you need to, you can also [compare across repositories](#).

base: master ← compare: branch1 ✓ Able to merge. These branches can be automatically merged.

Create pull request Discuss and review the changes in this comparison with others.

2 commits 1 file changed 0 commit comments 1 contributor

Commits on Feb 05, 2019

- Vishwanathms 3rd line added to branch1 f65685a
- Vishwanathms 4th line added to branch1 8f419f6

Showing 1 changed file with 3 additions and 1 deletion.

Unified Split

File1.txt

```
@@ -1,2 +1,4 @@
1 This is a new file in the local repo via GIT.
2 -2nd line added to the Branch of local repo GIT.
3 +2nd line added to the Branch of local repo GIT.
4 +3rd line added to the Branch of local repo GIT again. ( 2nd line is merged to master).
5 +4th line added to branch again for "git diff"
```

Select the source **“branch1”** and destination as **“master”**

There would be an comparison below between **branch** and **master**.

Then click on **“Create pull request”**.

GITHUB – lab Manual

Once the “Able to merge” is highlighted then click on “Create pull request”

Click on “Merge pull request”

Click on “**Confirm Merge**”

Now you have an option to “**Delete Branch**” after the merger.

Output:
